

MORPHOMETRICS OF CERRADO BIRDS FROM
THE RESERVA NATURAL LAGUNA BLANCA
(NE PARAGUAY)

Paul Smith, Derek Onley, Emma Northcote-Smith and Karina Atkinson

ABSTRACT

Smith P., Onley D., Northcote-Smith E., Atkinson K. 2012. *Morphometrics of cerrado birds from the Reserva Natural Laguna Blanca (NE Paraguay)*. Ring 34: 51-67.

Morphometric data are provided for 204 individuals of 61 species from the Reserva Natural Laguna Blanca in Departamento San Pedro in north-eastern Paraguay. Measurements were taken according to Svensson (1984). Data for 2 cerrado endemic species, 2 species of global conservation concern and 5 species of national conservation concern are presented. These are the first published biometric data for birds of the Paraguayan cerrado.
